PROFESSIONAL SUMMARY

Software Engineer with a Computer Engineering background and hands-on experience building healthcare, ERP, CRM, HR, payroll, and operational systems. Strong in Laravel, FilamentPHP, React, TypeScript, and modern full-stack development, with additional experience in Django, Angular, NestJS, MySQL, PostgreSQL, and REST APIs. Focused on reliable, maintainable software for institutions and teams that depend on accurate, scalable daily operations.

CORE TECHNOLOGIES

Backend & APIs	Laravel, FilamentPHP, PHP, Django, NestJS, Node.js, RESTful APIs
Frontend	React, Next.js, TypeScript, Angular, Vue.js, Inertia.js, Livewire, Alpine.js, Tailwind CSS
Databases	MySQL, PostgreSQL, SQLite, Redis, Eloquent ORM
Engineering	RBAC, System Integration, Database Design, Migrations, Queues, Jobs, Events, Testing, Debugging
Tools	Git, GitHub, Jira, Azure DevOps, Postman, Figma, VS Code, Claude, OpenAI, Codex

PROFESSIONAL EXPERIENCE

Computer Programmer I Southern Philippines Medical Center (SPMC)	<i>Apr 2026 – Present</i>
- Design, develop, and maintain hospital management systems supporting clinical and administrative operations. - Built payroll and healthcare workflow systems with role-based access control, user management, reporting, and multi-system API integration. - Contributed to database architecture and legacy modernization through schema design, migrations, and performance-focused improvements. - Build responsive enterprise interfaces with React and TypeScript while resolving critical frontend and backend issues. - Use AI-assisted development tools including Claude, OpenAI, and Codex to accelerate development, review code, and improve delivery workflows.	
Full Stack Developer DevbeansPH	<i>Nov 2024 – Oct 2025</i>
- Built and maintained ERP and CRM systems supporting sales, HR, payroll, inventory, and customer management workflows. - Developed admin dashboards, CRUD modules, role-based access control, and RESTful APIs using Laravel, FilamentPHP, and the TALL stack. - Applied clean architecture and SOLID principles to keep modules maintainable and extensible as requirements evolved. - Improved system performance using Redis caching and Laravel tooling while covering critical paths with unit and feature tests in PestPHP. - Worked in Agile sprints with Git, GitHub, and Jira, contributing to requirements analysis, sprint planning, code reviews, and feature delivery.	
Junior Software Engineer Jairosoft Inc.	<i>Sep 2024 – Oct 2024</i>
- Developed full-stack web application features using Angular 16, NestJS, TypeScript, and RESTful APIs. - Built an Automated Magnetic Lock Administration Website for managing access control operations through a centralized interface. - Implemented responsive frontend components and backend services while collaborating through code reviews and version-control workflows.	
Software Engineer Intern Jairosoft Inc.	<i>Feb 2024 – May 2024</i>
- Developed backend and API features for an automated magnetic lock security system using NestJS and PostgreSQL. - Integrated web software with Raspberry Pi hardware to support real-time device communication and remote lock control. - Worked across backend, database, and Angular frontend layers while testing and debugging production-oriented features.	

SELECTED PROJECT

OBSENTRY — University of Mindanao Student Vehicle Automated Monitoring System
Capstone research project combining embedded systems and web development to monitor student vehicles, including vehicle activity, location-related data, and operational metrics using ESP32-based hardware.

EDUCATION

Bachelor of Science in Computer Engineering University of Mindanao – Main 2019 – 2024
